BLINATUMOMAB

TRADE NAME
BLINCYTO

DRUG CLASS
Non-cytotoxic antineoplastic, monoclonal antibody (murine)

AVAILABILITY
Vial contains 38.5 microgram of blinatumomab. Also contains citric acid monohydrate, trehalose dihydrate, lysine hydrochloride, polysorbate-80 and sodium hydroxide.1 Supplied with a 10 mL vial of IV solution stabiliser containing citric acid monohydrate, lysine hydrochloride, polysorbate-80 and sodium hydroxide. The solution is clear and colourless to pale yellow.1

pH
No information

PREPARATION
See the Product Information to calculate the number of vials required. Reconstitute the vial with 3 mL of water for injection. Swirl gently to avoid excess foaming.1 Do not shake. Do not use the IV solution stabiliser to reconstitute the vial. The concentration of the reconstituted solution is 12.5 microgram/mL and the extractable volume is 35 microgram/2.8 mL.1 The solution is clear to slightly opalescent and colourless to slightly yellow.1 Dilute further before use: Add 5.5 mL of the IV solution stabiliser to a 250 mL bag of sodium chloride 0.9% and mix gently to avoid foaming. Add the required amount of the reconstituted solution to the bag and mix gently. Remove the air from the bag for use in an ambulatory infusion pump.1 Use this solution to prime the IV line. Do not prime the line with sodium chloride 0.9%.1 When preparing the infusion solution in an IV bag there is no need to remove fluid from the bag, the calculations are based on an overfill to a total volume of 265-275 mL. When preparing the infusion solution in a cassette, the total final volume should be 250 mL. Calculate the amount of sodium chloride 0.9% required by subtracting the volume of reconstituted solution and 5.5 mL of IV Solution Stabiliser from 250 mL.

STABILITY
Vial and IV solution stabiliser: store at 2 to 8 °C. Stable for up to 8 hours below 25 °C. Protect from light. Do not freeze.1 Reconstituted solution: stable for 4 hours below 25 °C and for 24 hours at 2 to 8 °C. Protect from light. Do not freeze.1 Infusion solution: stable for 96 hours below 25 °C and for 10 days at 2 to 8 °C. Store and transport at 2 to 8 °C. Do not keep at room temperature for more than 6 hours before starting the infusion.1

ADMINISTRATION
IM injection
Not recommended1
SUBCUT injection
Not recommended1
IV injection
Not recommended1

WARNING
The occupational hazard of intermittent low dose exposure to blinatumomab is not known. Wear a mask and gloves when preparing the infusion solution to minimise exposure. Blinatumomab is not cytotoxic. Serious neurological toxicities, infusion reactions and cytokine release syndrome may occur. Resuscitation facilities must be readily available.1 Medication errors have occurred. Follow the instructions for preparation and administration carefully.1
**IV infusion**  Give as a continuous IV infusion for 4 weeks. The infusion bag may be changed every 24, 48, 72 or 96 hours. Use a low protein-binding, 0.2 micron inline filter. Do not flush the catheter when changing the infusion bag or at the end of the infusion.¹

**COMPATIBILITY**

**Fluids**  Sodium chloride 0.9%¹

**Y-site**  Do not mix with other drugs. Use a dedicated line.¹

**INCOMPATIBILITY**

**Fluids**  No information

**Drugs**  No information

**SPECIAL NOTES**  It is recommended that at least the first 9 days of the first cycle and the first 2 days of the second cycle are given in hospital.¹

Give dexamethasone 1 hour before the first infusion of each cycle.¹ Check your local guidelines.

Cytokine Release Syndrome may be life-threatening and difficult to distinguish from an infusion reaction. Monitor for pyrexia, asthenia, headache and nausea. Slow or stop the infusion if required.¹

# CARFILZOMIB

**TRADE NAME**  
KYPROLIS

**DRUG CLASS**  
Non-cytotoxic antineoplastic, proteasome inhibitor

**AVAILABILITY**  
Vial contains 30 mg and 60 mg of carfilzomib. Also contains sulfobutyl betadex sodium, citric acid and sodium hydroxide.\(^1\)

**WARNING**  
The occupational hazard of intermittent low dose exposure to carfilzomib is not known. Wear a mask and gloves when preparing the infusion solution to minimise exposure. Carfilzomib is not cytotoxic.

**pH**  
No information

**PREPARATION**  
Reconstitute the 30 mg vial with 15 mL of water for injections and the 60 mg vial with 29 mL of water for injection. Swirl the vial gently for a minute or until completely dissolved. **Do not shake**.\(^1\)  
The concentration is 2 mg/mL. The solution is clear and colourless to slightly yellow.\(^1\)

**STABILITY**  
Vial: store at 2 to 8 °C. Do not freeze. Protect from light.\(^1\)  
Reconstituted solution: Stable for 4 hours below 25 °C and at for 24 hours 2 to 8 °C.\(^1\)

DACLIZUMAB

TRADE NAME ZINBRYTA

DRUG CLASS Monoclonal antibody (humanised) for multiple sclerosis

AVAILABILITY Prefilled pen or syringe contains 150 mg/mL of daclizumab. Also contains sodium succinate, succinic acid, sodium chloride and polysorbate-80. Contains 0.14 mmol of sodium per dose.1

The solution is clear to opalescent and colourless to slightly yellow.1

pH No information

PREPARATION Allow 30 minutes for the pen or syringe to reach room temperature before use.1

STABILITY Store at 2 to 8 °C. Do not freeze. Stable for 30 days below 30 °C. Protect from light.1

ADMINISTRATION

IM injection Not recommended1

SUBCUT injection Inject into the thigh, abdomen or upper arm.1

Suitable for self-administration in selected patients.1

IV injection Not recommended

IV infusion Not recommended

COMPATIBILITY Not applicable

INCOMPATIBILITY No information

SPECIAL NOTES If a dose is missed by less than 2 weeks, it can be given as soon as possible and the patient can remain on their original monthly schedule. If it is more than 2 weeks, they should skip the missed dose.1

ELOTUZUMAB

TRADE NAME
EMPLICITI

DRUG CLASS
Non-cytotoxic antineoplastic, monoclonal antibody (humanised)

AVAILABILITY
Vial contains 300 mg and 400 mg of elotuzumab. Also contains sodium citrate, citric acid monohydrate, sucrose and polysorbate-80.1

pH
5.7–6.31

PREPARATION
Reconstitute the 300 mg vial with 13 mL of water for injection and the 400 mg vial with 17 mL of water for injection. Swirl gently to avoid excess foaming.1 Do not shake. May take about 10 minutes to dissolve. Allow the solution to stand for 5 to 10 minutes.1
The concentration is 25 mg/mL and the extractable volume is 300 mg/12 mL and 400 mg/16 mL.
The solution is clear to opalescent and colourless to slightly yellow.
Dilute further before use:
Add the required dose to 230 mL of a compatible fluid in a PVC or polyolefin bag. If necessary reduce the volume of the fluid used so that the total amount of fluid is not more than 5 mL/kg of patient weight.1

STABILITY
Vial: store at 2 to 8 °C. Do not freeze. Protect from light.1
Reconstituted solution: stable for 24 hours at 2 to 8 °C. Protect from light.1
Infusion solution: stable for 24 hours at 2 to 8 °C. Protect from light.1 Stable for up to 8 hours below 25 °C and in room light. Compete the infusion within 24 hours of preparation.1

ADMINISTRATION
IM injection
Not recommended1

SUBCUT injection
Not recommended1

IV injection
Not recommended1

IV infusion
Start the infusion at a rate of 0.5 mL/minute. Increase the rate every 30 minutes if tolerated to a maximum rate of 5 mL/minute. Use a low protein-binding, 0.2–1.2 micron inline filter.1

COMPATIBILITY
Fluids
Glucose 5%, sodium chloride 0.9%1

Y-site
No information

INCOMPATIBILITY
Fluids
No information

Drugs
No information

SPECIAL NOTES
Infusion reactions may be severe and include fever, chills and hypertension. For mild to moderate infusion reactions, slow the rate of the infusion and monitor carefully. Stop the infusion if the reaction is severe.1
Give dexamethasone, an antihistamine, ranitidine and paracetamol before the infusion.1 Check your local guidelines.

Drugs  No information

SPECIAL NOTES  For mild or moderate infusion reactions slow the rate of the infusion and monitor carefully. For severe infusion reactions stop the infusion and treat accordingly.1 Check your local guidelines for premedication requirements. Anaphylactic reactions are rare but are a medical emergency. Stop the infusion and commence treatment immediately.
